PROFILE

Backend developer working with Go. Since March 2026 at Top Doctors as an Integration Developer, where I have built more than 10 integrations with external healthcare systems: insurers, hospitals, clinic management software and diagnostic imaging. I work with REST APIs, webhooks, GCP Pub/Sub and testing, and I want to keep growing in backend and distributed systems.

PROFESSIONAL EXPERIENCE

Integration Developer (Go) · Top Doctors

Mar 2026 – present · Remote

- More than 10 integrations built or extended with third-party APIs: master data sync (centres, doctors, services, insurers) and the full appointment lifecycle (availability, booking, cancellation and rescheduling).
- Asynchronous appointment processing with GCP Pub/Sub, incoming webhooks and outgoing REST clients, with per-provider routing and model mapping between systems.
- Adapter layer in API v2 to route the same endpoints to different providers without changing the JSON contract.
- Designed and built solo a weekly ingestion pipeline for a public medicines catalogue: XML parsing, relational model, migrations and an HTTP query API.
- Layered services with unit tests (mockery) and production incident fixing: duplicate bookings, concurrency and mapping errors.

Go · REST APIs · Webhooks · GCP Pub/Sub · Docker · SQL · GORM · mockery

Mobile Developer (Flutter) · Ulandu

Mar 2025 – Jun 2025 · Talavera de la Reina

- "Bendita Burger" commercial app (iOS and Android): ordering flow, Stripe payments, Firebase push notifications and REST APIs from a Laravel backend.
- Barcode scanner and bookings for padel clubs; critical bug fixing before each release.

Level Designer · Aeternum Game Studios

May 2020 – Jul 2022 · Talavera de la Reina

- Technical design of more than 35 levels in Unity for *Aeterna Noctis* (PlayStation, Xbox, Switch and PC), together with the programming team.

OWN PROJECTS · ACELERIK

Acelerik Booking · Bookings and deposits for kids' play centres

github.com/cvidaal/acelerik-demo

- REST API in Go (Gin + Huma, with an OpenAPI spec) on PostgreSQL with pgx: booking management with a validated state machine (pending, confirmed, cancelled, completed).
- Deposit payments with Stripe Checkout and webhooks, using transactions and row locking (SELECT ... FOR UPDATE) to prevent duplicate payments.
- Table-driven unit tests for services and handlers; admin panel in React and TypeScript.

WhatsApp order bot · ACELERIK client (pilot)

Python · FastAPI

- Receives messages and voice notes through the WhatsApp Cloud API, transcribes the audio and extracts the order with an LLM; business rules validate each line and anything doubtful goes to human review.
- Daily close with a Europe/Madrid cut-off time and a production sheet; more than 300 tests.

TECHNICAL SKILLS

Backend	Go, Gin, REST APIs, webhooks, GCP Pub/Sub, asynchronous processing, systems integration
Data and testing	SQL, PostgreSQL, GORM, pgx, migrations, unit tests with mockery
Tools and other	Docker, Git, Postman, Python, FastAPI, TypeScript, Node.js, Flutter / Dart

EDUCATION

HND in Multiplatform App Development (CFGS DAM) · Kapital Inteligente · 2023 – 2025

Vocational diploma in IT Systems and Networks (CFGM SMR) · IES Ribera del Tajo · 2021 – 2023

LANGUAGES

Spanish: native
English: A2–B1, improving
